

MASTER MICROSHREDDER TURNS DATA INTO DUST

One of the many things that sets Securis apart from the competition is our latest technology in shredding – specifically our microshredding services. Shredding is part of any secure computer disposal, but larger and older equipment may not be getting the job done. Solid State Drives (SSDs), flash drives, smart phones, SIM and memory cards, and micro SD cards will literally fall through the cracks of most data destruction and recycling processes.

MICROSHREDDING PULVERIZES DEVICES INTO 2MM E-CRUMBS AS PRESCRIBED BY THE NSA

Securis' proprietary engineered Master Microshredder allows us to ensure total data destruction. Microshredding is a must to ensure your e-waste is properly processed so it can be recycled. We create an electronics pulp that prevents any piece from being accessed, read, or replicated. That means there's no risk to you that your data will fall into the wrong hands.

Meet all state and federal requirements by putting your hard drives and other data storage through our innovative microshredding solution. Securis is committed to your data safety, so we ensure complete data destruction and secure computer disposal.

U.S. Dime

WHY LESS THAN A 2MM PARTICLE SIZE?

A standard platter drive is easily destroyed using a traditional shredder or degausser. Degaussing will not work on solid-state drives or cell phones, and SSDs contain small memory chips that can slip through the cracks of a traditional shredder which is why a microshredder is required.

Contact Securis today to schedule a live microshredder demonstration.

COMPANY PROFILE

Securis helps security-conscious organizations properly decommission and responsibly recycle IT assets to ensure zero data loss or theft—whether they're destroying, recycling or donating. Our customers include security-conscious organizations who must comply with various regulations on how to manage the sensitive data they store. Securis is GSA-approved, certified by NAID and the DLA Logistics information Service, and is 100% compliant with all federal, state, and local regulations. Securis' highly trained Security Technicians can come to the client site to audit, destroy and securely recycle any type of IT asset.

SERVICES

- Information Technology Asset Disposal (ITAD)
- Degaussing
- Asset Inventory Service
- Asset Consignment Sales
- Data Destruction and Data Purging
- On-Site & Off-Site Micro-Shredding
- Logistics & Transportation
- On-Site & Off-Site Shredding
- Custom Solutions
- Incineration

NAICS CODES

- 423690 - Other electronic parts and equipment wholesalers
- 541513 - Computer systems facilities
- 562910 - Environmental remediation
- 541620 - Environmental consulting services
- 561110 - Office administration services
- 561210 - Facilities support services
- 561990 - Inventory computing services & auctioneer
- 562111 - Recyclable material collection
- 562219 - Waste (except sewage) treatment facilities, nonhazardous
- 562920 - Waste recovery facilities

CONTRACTING INFORMATION

- Cage Code – 361L9
- Duns – 185932360
- EIN –35-2343644
- GSA Schedule 36 - GS-03F-0068V
- Small Business (SB)
- ORKA Completed/Updated

CONTRACTING VEHICLES

- (GSA) Alliant—Small & Large Business
- GSA Vets
- Navy SeaPort-e
- DHS Eagle

PAST PERFORMANCE

Organization

- Amazon.com
- Federal Reserve
- General Dynamics IT
- Loudoun County Government
- Defense Contract Management Agency

Solution

- On-Site Degaussing, On-Site Shredding
- On-Site Shredding, Data Destruction, Recycling
- On-Site Shredding, Data Destruction, Recycling
- On-Site Shredding
- On-Site Shredding
