

## HOSTED VoIP

OneVoice's hosted VoIP service is a managed converged voice and internet solution for small to medium-sized companies with one or more locations. Its functionality and affordability enable businesses to have the look and feel of a corporate giant.

### WHAT IS VoIP?

Voice over Internet Protocol (VoIP) is an emerging set of applications which allows you to make phone calls over a broadband or dedicated internet connection. VoIP is used to call any telephone in the world. It doesn't matter if the person you are calling has VoIP or not, as this function is managed by your VoIP Service Provider.

VoIP telephone calls are made by using a personal computer connected to the internet, or by using an IP phone. Over the last few years, VoIP has become increasingly popular and is starting to replace existing telephone networks. Businesses are now canceling their traditional phone lines and switching to VoIP.

### WHY USE VoIP?

VoIP provides similar features to traditional phone systems, such as voicemail, call forwarding, call waiting, caller ID, and caller blocking. OneVoice's hosted VoIP has advanced features that were once only available on high end Public Branch Exchange (PBX) and phone systems, such as a virtual number (a telephone number from any available area code). Another benefit is a lower capital investment; traditional in-house phone systems can cost up to \$1,500 per station. OneVoice's VoIP solution eliminates the need for a costly PBX, significantly lowering upfront and recurring fees.

Portability is another advantage of VoIP. You can make and receive phone calls wherever there is a broadband connection by signing into your VoIP account via an app from your PC or cell phone. VoIP can be as convenient and simple as e-mail. If you are traveling, sign into your VoIP from the app to call your office or business associates.

## BENEFITS:

### **Mobility**

Hosted VoIP from OneVoice Communication allows employees to communicate with one another no matter where they are. You can make and receive phone calls wherever there is a broadband connection by signing into your VoIP account via an app from your PC or cell phone.
